

ZOIDCOIN

DECENTRALIZED ADVERTISING

[Token Sale Details](#)

I. Token Sale Details

Zoidcoin is a tech company that provides blockchain solutions for real world problems.

For Zoidcoin Network we make use of our proprietary privacy and payment protocols to solve the data security and payment efficiency problems, while the inefficiency in advertising is solved through our reward based communication model.

Zoidcoin Network is governed by our Privacy and Payment protocols. These protocols run on The Ethereum Network, they are fully automated and they require ZCN transactions to be activated. Zoidcoin (ZCN) is an ERC 20 Token that fuels Zoidcoin Network.

The protocols can be used as solutions for other companies as well, but they still require ZCN transactions to function. This means that ZCN adoption will be accelerated not only by the success of Zoidcoin Network but also by the adoption of the protocols by other companies.

This sale is governed by the term & conditions policy found at <http://bit.ly/TermsOfSaleZCN>

Total Supply & Token Allocation

Our total coin supply is 700 million Zoidcoin out of which 420 million are allocated for the sale supply:
